Solar and Lunar Eclipses

— **Dr. Nikodem Poplawski**

Department of Mathematics & Physics
University of New Haven

Abstract: What is a solar eclipse? What is a lunar eclipse? How often do they occur? Why are they so rare? In this talk, I will answer and explain these questions. I will also show some pictures and videos of two total solar eclipses I have seen, August 1999 in Hungary and August 2017 in South Carolina.

Further Information

For further information, please contact Dr. Yasanthi Kottegoda at the Department of Mathematics and Physics, Office: Maxcy 315, 203-932-1206, YKottegoda@newhaven.edu.
